

Pleasing everyone without pleasing everyone

BTCPay Server: Baltic Honeybadger 2022

- All a dev wants is to write code
- All a UX designer wants is to remove code

- All a dev wants is to write code
- All a UX designer wants is to remove code

How do you please everyone?

- The only way is to define a lean, core mission and maintain it
- ..but also provide expansion points so that everything can be expanded through the individual's choices

Multiple expansion points

- **Integrations** - Wordpress, Drupal, Magento, Joomla
- **Docker fragments** - Core Lightning, Ride the lightning, Tor, Electrum
- And now **plugins** - Liquid+, LNBank, Ticket Tailor, Shopify, NFC Payments

BTCPay plugins?

- App store-like experience
- RECKLESS (kind of)
- Opt in
- Unofficial
- Not necessarily following the core mission

Overly server-side system

TicketTailor

1.0.0.0

1.0.5.0 available

[Show update information](#)

Update

Uninstall

Bitcoin Whitepaper

1.0.1.0

This makes the Bitcoin whitepaper available

Dependencies

BTCPayServer: >=1.4.0.0

Install

What can plugins do?

- Adding additional integrations, like Shopify and Ticket Tailor
- Create utilities that hook directly into BTCPay Server's rich internal platform
- Modify the UI to optimize experiences

What's next with plugins?

- Better verification for safety
- More features moved to plugin system
- Plugin Store UI
- Development documentation
- Even more flexibility, such as creating additional payment methods, payout methods, processors, apps, etc
